Safety or Profit? Dec 20 2019 As the title *Safety or Profit?* suggests, health and safety at work needs to be understood in the context of the wider political economy. This book brings together contributions informed by this view from internationally recognized scholars. It reviews the governance of health and safety at work, with special reference to Australia, Canada, Sweden, and the United Kingdom. Three main aspects are discussed. The restructuring of the labor market: this is considered with respect to precarious work and to gender issues and their implications for the health and safety of workers. The neoliberal agenda: this is examined with respect to the diminished power of organized labor, decriminalization, and new governance theory, including an examination of how well the health-and-safety-at-work regimes put in place in many industrial societies about forty years ago have fared and how distinctive the recent emphasis on self-regulation in several countries really is. The role of evidence: there is a dearth of evidence-based policy. The book examines how policy on health and safety at work is formulated at both company and state levels. Cases considered include the scant regard paid to evidence by an official inquiry into future strategy in Canada; the lack of evidence-based policy and the reluctance to observe the precautionary principle with respect to work-related cancer in the United Kingdom; and the failure to learn from past mistakes in the Deepwater Horizon disaster in the Gulf of Mexico.

The Pre-Flight Safety Briefing - What are the Reasons for some Passengers' Lack of Attentiveness during Pre-Flight Safety Briefing? Nov 11 2021 Master's Thesis from the year 2009 in the subject Engineering - Aerospace Technology, Everglades University, language: English, abstract: The Pre-Flight Safety Briefing: What are the Reasons for some Passengers' Lack of Attentiveness during Pre-Flight Safety Briefing? Traveling by air has its own special challenges and hazards. Passengers'

safety is a major topic of interest for the airlines since its inception, and the best service an air carrier can provide is good safety. This thesis examined the behavioral patterns of some passengers who lack the attentiveness during pre-flight safety briefing. The researcher compared the behavior of three segments: leisure travelers, frequent fliers, and the aviation professionals. The main finding of this research was that people crave acceptance by whatever group they choose to belong to. Based on the conclusions of this research study, the researcher's recommendations are the following: This study provides evidence that airplane accidents are indeed survivable and passengers can expect to survive crashes more times than not. In general, human beings crave acceptance by whatever group they choose to belong to, hence, the airlines key objective should be to make the passengers feel that they are really part of the "team." In addition, as group acceptance is a powerful motivator, any presentation of flight safety should be casted by role models who can influence the public.

Marine Safety Sep 09 2021 Marine Safety provides a toolbox of field-tested and proven tools for assessing and managing marine risks and making better-informed decisions to prevent marine casualties. Using this book as a guide, managers in the marine industry learn to apply 12 common risk-based decision-making tools that help them make practical and technically-defensible decisions for managing port and waterway operations, conducting inspections, and preparing and responding to accidents. The authors thorough examine the 12 tools and include discussions on each tool's concepts, limitations, common uses, procedures, terminology, and applications to marine safety in a clearly outlined, user-friendly format. Marine Safety examines such tools as Pareto Analysis, Checklist Analysis, Relative Ranking/Risk Indexing, Change Analysis, What-if Analysis, Hazard and Operability, Fault Tree Analysis, and Event and Causal Factor Charting. In addition, Marine Safety examines key factors for choosing risk assessment methods and suggest risk assessment approaches to support different types of decision making, depending on each situation. Examples of common marine-oriented situations, illustrative charts, graphs, and diagrams are included for easy understanding.

Safety Protocols in the Food Industry and Emerging Concerns Jun 18 2022

This brief reports about safety protocols in the food producing industry. Hygiene, i.e., the prevention of contamination and microbial infections, is of greatest importance in the industry, as are disinfection techniques, to prevent or to fight microbial contaminations and infections, and practical emerging concerns are centered around these fundamental concerns. The first part focuses on the attempts and possibilities to prevent microbial spreading. Part II discusses disinfection techniques and their risks, advantages and disadvantages. Current industry trends, such as the attempts to substitute chlorine in disinfection, are critically reviewed. In all, this brief volume discusses decision procedures and strategies that are being applied to prevent, reduce and fight microbial spreading. In particular, material that comes into contact with the foods, has to fulfill strict requirements. This aspect is explained in detail, and how little details can have great effects. The brief deals with the important question: is disinfection more an ally or an enemy?

Contracting and Safety Jan 01 2021 This open access book examines the increase in outsourcing, contracting and subcontracting as ways of organising work. It explores the impact of these employment arrangements on public safety, particularly when they are linked to complex supply networks in a range of engineering industries including oil and gas, nuclear power and aviation. The brief provides practical recommendations on how best to manage arrangements that target short-term profitability and also maintain excellence in long-term safety outcomes. The brief is a source of advice for organisations on how to maximise the benefits and minimise long-term system reliability issues that can be introduced by contracting and outsourcing, rather than assuming it to be a wholly negative or positive practice. Contracting and Safety comprises qualitative, empirical studies focusing on high-reliability organisation. As such, this brief provides a rich picture of the experience of working in complex supply chains. It will be of interest to researchers in industrial safety, as well as safety professionals and project managers within engineering industries.

Essentials for Quality and Safety Improvement in Health Care Mar 23 2020 Patient safety and quality improvement in health care remain a global priority. Subpar performance in health care, however, is still common more than a decade after the christening of patient safety in Africa. The core principle of safety and quality improvement systems is to identify and assess the root cause of failures in order to learn from them and devise a means to improve and to avoid recurrence. This book is designed to encourage, facilitate and empower healthcare workers in the development and implementation of strategically driven patient safety and quality improvement initiatives for safer healthcare systems and healthcare facilities in low- and middle-income countries (LMICs) of Africa. It also highlights some of the profound challenges and barriers to designing and implementing patient safety and quality improvement interventions or programmes in the region and reiterates the need to remain focused and determined to work out solutions with confidence and overcome these barriers. In the book, chapters highlight six essential components crucial for achieving evolutionary progress in safety and quality improvement in a healthcare system: Standard operating procedure Audit Research Safety management Quality management Evaluation Practical steps in planning and conducting these six essential components are outlined with some specific features to aid learning and facilitate their implementation. The authors have experience and expertise in the medical practice gained in Africa and a decade of knowledge and experience from consultancy work in safety and quality improvement in health care within and outside the region. **Essentials for Quality and Safety Improvement in Health Care: A Resource for Developing Countries** is authored for both medical professionals and those from other professions who are interested in and enthusiastic about patient safety and healthcare quality and

therefore willing to build a career in this field. It is relevant to all health institutions, health and non-health workers, and can be used as a checklist while rendering quality and safe health care.
