**A User's Guide to ISRP** Mar 23 2020 This report describes the capabilities and use of the Interactive Survey Reduction Program (ISRP). ISRP is a FORTRAN program which permits

interactive reduction, editing, and plotting of field survey notes and the correction of previously entered data. The primary output from ISRP is a two-dimensional distance offshore and elevation data file compatible with the Beach Profile and Analysis System (BPAS) program developed by CERC (see CERC TR 82-1). The BPAS includes six modules for use in editing, analyzing, and plotting beach profile data; it provides a powerful tool for studying beach profile changes. Because the data format created by ISRP is sufficiently general, anyone processing most kinds of beach and nearshore survey data will find ISRP useful. This report includes detailed discussions of each ISRP option. Appendices A-D contain an option summary, a sample run, a discussion of program mechanics, and installation-specific instructions for executing ISRP. The ISRP program is not included in this report but is available from the Engineer Computer Program Library, US Army Engineer Waterways Experiment Station, Vicksburg, Miss.
